

How does Policy Stack Up?

An assessment of Northern Ireland's national climate adaptation policies

HOST INSTITUTION

Even if we stop all Greenhouse emissions today, we have now locked in some degree of climate change, with associated shocks and impacts that we cannot avoid. Climate Adaptation is the process of preparing for those impacts, and increasing resilience in a way that brings multiple benefits for Northern Ireland's communities, economy and nature. In this summary for policy-makers and practitioners, the EPA-funded Transboundary Adaptation Learning Exchange (TALX) project team identifies the barriers and enablers of climate adaptation and assesses national policy against these, highlighting specific areas where Northern Ireland is neglecting to meet its policy ambitions, and how it must improve.

Key Messages

The TALX project has identified five key principles which are central to the development of good quality adaptation policy. Despite making progress in certain aspects, (this was undertaken before the Climate Change Act (NI) 2022 came into law), Northern Ireland is not fully addressing any of the principles. Across all areas, policy has either failed to acknowledge essential criteria for adaptation, or has not provided resource for implementation. Important messages in the Northern Irish context, for each theme, are highlighted below:

- 1. Stakeholder engagement: Representative stakeholder engagement is a fundamental feature of good quality adaptation planning, especially for difficult decisions which require local buy-in. None of the structures that currently exist, enable the breadth and depth of engagement required.
- 2. Policy and Governance: Northern Ireland has been lacking in ambition to improve climate adaptation in the past, with no underpinning legislation, and no monitoring and evaluation framework. With the introduction of the Climate Change Act (NI) 2022, some elements of this will have changed. However, governance structures still largely promote siloed working, and the lack of resources for cross-sector and multi-level collaboration mean that issues of justice and equity are not adequately being addressed. A lack of resource for implementation has also hindered the emergence of climate adaptation leaders and this has impacted on action at local scales, which requires stakeholder input and support to be successful.
- 3. Resource: Northern Irish policy fails to acknowledge the scale of required staff resource and financing for climate adaptation, something which has a knock on effect on capacity building, obtaining evidence and communicating it to stakeholders. Doing nothing is the most expensive, and worst option. However, without clear government understanding and plans which acknowledge the scale of the financial cost of implementing adaptation measures, policy goals will never be reached and the adaptation gap will continue to grow.
- 4. Decision-making: Successful adaptation at all levels is underpinned by good decision-making, however, the skills, resources and guidance needed to assess and decide on adaptation options in an equitable manner are currently not acknowledged in national level policy. This has a knock on effect, and sets the standard for sub-national policy as well, increasing the likelihood of inequity and maladaptation in Northern Ireland.
- 5. Mainstreaming: Policy acknowledges that adaptation should become part of the 'business-as-usual', but there is still a large adaptation gap in Northern Ireland. Climate adaptation and mitigation are not often acknowledged in policy as needing to be addressed simultaneously. There is a major gap in both how adaptation is perceived by society, and a singificant lack of sustainable adaptation initiatives currently being implemented across Northern Ireland.

Recommendations

To achieve successful and effective climate adaptation, we recommend policy-makers and practitioners should:

- Incentivise place-based adaptation partnerships¹ to move away from siloed working and promote cross-sector and multi-level collaboration. Placebased adaptation partnerships (e.g. Eastside Partnership) are an excellent tool that can bring a wide range of stakeholders together to address common risks and opportunities in their locality. By advertising and funding locally-led partnerships and initiatives, the government can support capacity building and encourage ownership of adaptation action among stakeholders.
- Adaptation needs to move beyond short-term project and political cycles. Northern Ireland needs to begin developing long-term and selfsustaining adaptation initiatives. Policymaking can support a pipeline of adaptation projects that will have social and economic co-benefits affecting real and meaningful change in society.
- Establish opportunities for dialogue at both a local and national scale with representative stakeholders to establish stong cross-community relationships and build trust. Ensure feedback is meaningfully integrated into subsequent

adaptation policies and actions, to support systemic change.

- 4. Ensure transparent monitoring, evaluation and learning are embedded in adaptation activity at all levels, so that there is a process for continual improvement. Mandate and support the reporting of adaptation progress for sectors and local authorities on regular cycles and promote and reward examples of practical and innovative climate action solutions that prioritise mitigation and adaptation co-benefits.
- 5. **Map climate impacts** alongside existing regional data such as health and inequity information to see where the highest vulnerabilities lie. Use these maps to aid decision-making and develop and prioritise adaptation solutions that will increase the resilience of the most vulnerable stakeholders and communities and minimise inequity and injustice in society.
- Communicate and co-develop adaptation actions with those they are intended to benefit to increase support and avoid maladaptation². Engage with a wide range of local stakeholders throughout the adaptation process, and use tailored communication to ensure awareness and understanding of initiatives.

Detailed Results

You can find a breakdown of the exact criteria used to assess National Adaptation Policy on the next page, listed under the 5 headings from the 'key messages' section above. These criteria were decided upon after a comprehensive literature review of international good practice in climate adaptation by the TALX team and validated by an expert panel of practitioners and policy-makers, using the Delphi approach. More information on how the TALX team arrived at these conclusions and how some of these recommendations can be carried out is now available on the Transboundry Adaptation Learning Exchange (TALX) website (www.talx.ie), where the TALX project has developed a framework to support place-based adaptation partnerships.

¹ Place-based Adaptation Partnerships - formed from cross-sectoral and multi-level collaborations to support adaptation in a particular area ² Maladaptation – when climate adaptation actions have unintended negative consequences

Table 1: The criteria used to assess national climate adaptation policy (Blue: Acknowledged in policy with resources provided, Amber: Acknowledged in policy without resources provided, Red: Not acknowledged in policy; Split Colours: Criteria has changed since the completion of the Assessment)

Factor	Sub-factor	Code	Criteria	Rating
r t	Stakeholder	S1	Representative stakeholder involvement throughout the entire climate adaptation process, from the	
Stakeholder Engagement	Engagement		creation of adaptation policy to the implementation and evaluation of adaptation plans	
		S2	A dedicated process in place to facilitate inclusive stakeholder involvement in the preparation of	
			adaptation policies	
S				
	National Policy	Ρ1	A central administration body officially in charge of adaptation policy making	
Policy and Governance		P2	A national climate adaptation policy	
		Р3	Country level legislation in place to underpin adaptation policy (including frameworks and strategies etc.)	
		P4	Independent monitoring and evaluation of national policy	
	Leadership &	P5	Horizontal (cross-sectoral) coordination mechanisms exist within the governance system, with division of	
	Co-ordination of		responsibilities and SMART objectives and the alignment of policies	
	Roles and	P6	Vertical (multi-level) coordination mechanisms exist within the governance system, enabling all levels of	
	Responsibilities		administration from local to national to influence policy making	
		P7	Creation of spaces for leaders of climate adaptation to emerge across scales	
			Climate adaptation is scalable, able to be tailored to different levels	
		P9	Transparent climate finance with regards to adaptation initiatives	
		P10	Transboundary cooperation (either existing or planned) to work together to address common challenges	
	Climate Justice	D11	with other countries Domestic justice and equity issues (economic, social, environmental and cultural), relevant to each	
		P11	country, are recognised in national-level climate change policy and implementation (e.g. through decision-	
	and Equity		making)	
		P12	Processes are in place to allow actions to reduce any identified differences and/or ensure the benefits of	
		1 12	interventions accrue to the most vulnerable	
		P13	Climate adaptation policy development, implementation and review is fully transparent	
Decision- making	Staff and		Appropriate financing (enough to cover the cost of policy actions) is being applied to climate adaptation to	,
	Financing		achieve policy goals at all levels of governance	
	0	R2	Accessible long-term and self-sustaining resources are available to support policy goals at increasing	
			climate resilience (i.e. funding, infrastructure, human resources)	
	Capacity	R3	Policy supports education, empowerment and engagement of stakeholders at all levels of decision making	
	Building and		and action taking in relation to adaptation	
	understanding	R4	Mechanisms exist to recruit and train practitioners with the specific skills required to undertake complex	
	the capability of		climate adaptation	
	decision-makers			
	and action			
	takers	DE		
	Information and Data	R5	The policy supports advances in scientific research to improve understanding and inform decision-making	
	Communication	R6 R7	Guidance for how to employ climate adaptation information is provided at sub-national levels Communication and engagement strategies included within the policy that utilize multiple platforms in	
	and Guidance	N/	order to reach diverse stakeholders	
		R8	Recognition within the policy that climate change is an international issue and that adaptation strategies	
		NO	must look beyond national boundaries (i.e. the policy ensures the international aspect of adaptation is	
			considered at decision-making levels)	
		R9	Learning and support networks are available to enable all decision makers in producing and implementing	
			appropriate climate adaptation policies	
	Decision-making	D1	Priority adaptation options are identified, prioritised and selected based on robust, equitable and	
			transparent methods (e.g. using decision support tools)	
		D2	An evaluation process is in place to assess the effectiveness of actions taken across all aspects of climate	
			adaptation (i.e. from stakeholder engagement to mainstreaming)	
		D3	The policy recognises that adaptation is an iterative and flexible process that accounts for new	
			information/ experience	
Mainstreaming	Mainstreaming	M1	Consideration of climate change adaptation been included in the national frameworks for environmental	
			impact assessments and DRR's	
		M2	Key policies recognise the need for adaptation action in future growth and development as a result of the	
			impacts of climate change	
			National policy instruments promote adaptation at sectoral level, in line with national priorities	
		M4	Adaptation is mainstreamed in insurance or alternative policy instruments to provide incentives for	
			investments in risk prevention	
			Climate mitigation and adaptation are being investigated in tandem	
		M6	Adaptation actions are sustainable (i.e. meet environmental, societal and cultural needs) for their	
			intended lifetime
